Master of Science program
The goal of the Master of Science in Data Science Program is to educate data science leaders. The program prepares students at an advanced level to derive insights from real-world datasets, using the latest tools and analytical methods, and to interpret and communicate their findings effectively. The curriculum closely complements what has been identified as typical data science tasks to include, but not limited to, the identification and interpretation of rich data sources, the management of large amounts of data, the merging of data sources, ensuring consistency of datasets, creating visualizations to aid in understanding data, building mathematical models using the data, and presenting and communicating the data insights/findings to diverse expert and non-expert audiences.

The program features a multidisciplinary curriculum that draws primarily from computer science, math and statistics, management, and communication and represents a fixed curriculum comprising 36 credits (12 three-credit courses), including a required capstone course as the culminating experience for students. The online M.S. in Data Science Program focuses primarily on adult and non-traditional students who hold an undergraduate degree and have the desire to continue their education towards a graduate degree, primarily to expand knowledge and specialized skills in this area and for career advancement.

Certificate program
The graduate Data Science Certificate is a 15-credit program for working professionals who require increased competency in core data science topics including statistics, exploratory data analysis, programming, data warehousing, data mining and machine learning, and communicating about data.

Collaborative programs
Both the M.S. in Data Science and the graduate Data Science Certificate are fully online programs offered jointly by UW-Eau Claire, UW-Green Bay, UW-La Crosse, UW-Oshkosh, UW-Stevens Point, and UW-Superior. The programs follow a home-campus model. Candidates apply to one of the six partner institutions. Upon a student's admittance, that institution becomes the student's administrative home for the degree through graduation.

Program length
The Master of Science (M.S.) in Data Science Program is typically a two-year program. The graduate Data Science Certificate is typically a one-year program. The program length is based on how long the required UW coursework would take to complete for a full-time student who does not need to complete any prerequisite coursework. Program length may be extended if students attend part-time (if approved by program) or due to the requirements of an individual student's plan of coursework, research or capstone project.

Courses
DS 700 Cr.3
Foundations of Data Science
This course provides an introduction to data science and highlights its importance in business decision making. It provides an overview of commonly used data science tools along with spreadsheets, relational databases, statistics and programming assignments to lay the foundation for data science applications. Prerequisite: admission to a graduate Data Science Program. Consent of department. Offered Fall, Spring.

DS 705 Cr.3
Statistical Methods
Statistical methods and inference procedures will be presented in this course with an emphasis on applications, computer implementation, and interpretation of results. Topics include simple and multiple regression, model selection, correlation, moderation/interaction analysis, logistic regression, chi-square test, ANOVA, Kruskal-Wallis test, MANOVA, factor analysis, and canonical correlation analysis. Prerequisite: DS 700; admission to MS in Data Science. Consent of department. Offered Fall, Spring.

DS 710 Cr.3
Programming for Data Science
Introduction to programming languages and packages used in data science. Prerequisite: admission to a graduate Data Science Program. Consent of department. Offered Fall, Spring.

DS 715 Cr.3
Data Warehousing
Introduce the concepts and techniques to work with and reason about subject-oriented, integrated, time-variant, and nonvolatile collections of data in support of management's decision-making process. Prerequisite: admission to a graduate Data Science Program. Consent of department. Offered Fall, Spring.

DS 730 Cr.3
Big Data: High Performance Computing
This course will teach students how to process large datasets efficiently. Students will be introduced to non-relational databases. Students will learn algorithms that allow for the distributed processing of large datasets across clusters. This course will teach students how to process large datasets efficiently. Prerequisite: DS 710 or concurrent enrollment; admission to MS in Data Science. Consent of department. Offered Fall, Spring.
**Communicating about Data**
This course will prepare students to master technical, informational and persuasive communication to meet organizational goals. Technical communication topics include a study of the nature, structure and interpretation of data. Informational communication topics include data visualization and design of data for understanding and action. Persuasive communication topics include the study of written, verbal and nonverbal approaches to influencing decision makers. Prerequisite: admission to a graduate Data Science Program. Consent of department. Offered Fall, Spring.

**Data Mining and Machine Learning**
This course covers data mining and machine learning methods and procedures for diagnostic and predictive analytics. Topics include association rules, clustering algorithms, tools for classification, and ensemble methods. Computer implementation and applications will be emphasized. Prerequisite: DS 700, DS 710; admission to graduate Data Science Program. Consent of department. Offered Fall, Spring.

**Visualization and Unstructured Data Analysis**
This course covers two aspects of data analytics. First, it teaches techniques to generate visualizations appropriate to the audience type, task, and data. Second, it teaches methods and techniques for analyzing unstructured data - including text mining, web text mining and social network analysis. Prerequisite: DS 740; admission to MS in Data Science. Consent of department. Offered Fall, Spring.

**Ethics of Data Science**
This course will focus on the investigation of ethical issues in computer science that ultimately also pertains to data science, including privacy, plagiarism, intellectual property rights, piracy, security, confidentiality and many other issues. Our study of these issues will begin broadly, with a look at ethical issues in computer science at large. We will then make inferences to the narrower field of data science. We will consider ethical arguments and positions, the quality and integrity of decisions and inferences based on data, and how important cases and laws have shaped the legality, if not the morality, of data science related computing. Case studies will be used to investigate issues. Prerequisite: DS 740; admission to MS in Data Science. Consent of department. Offered Fall, Spring.

**Prescriptive Analytics**
This course covers procedures and techniques for using data to inform the decision-making process. Topics include optimization, decision analysis, game theory, and simulation. Case studies and applications will be emphasized. Prerequisite: DS 705, DS 710; admission to MS in Data Science. Consent of department. Offered Fall, Spring.

**Data Science and Strategic Decision Making**
This course examines how data science relates to developing strategies for business organizations. The emphasis is on obtaining decision-making value from an organization's data assets. The course will investigate the use of data science findings to develop solutions to competitive business challenges. Case studies will be reviewed to examine how data science methods can support business decision-making. A range of methods the data scientist can use to get people within the organization onboard with data science projects will be reviewed. The future of data science as a decision-making tool will be explored. Prerequisite: admission to MS in Data Science. Consent of department. Offered Fall, Spring.
