The Medical Dosimetry Program offers a Master of Science that provides students with an educational foundation in medical dosimetry as well as clinical experience in a radiation oncology department. The curriculum requires online courses taken synchronously with a clinical internship at an affiliated site. Admission to the program is on a competitive basis.

"The Medical Dosimetrist is a member of the radiation oncology team who has knowledge of the overall characteristics and clinical relevance of radiation oncology treatment machines and equipment, is cognizant of procedures commonly used in brachytherapy and has the education and expertise necessary to generate radiation dose distributions and dose calculations in collaboration with the medical physicist and radiation oncologist" (A.A.M.D.).

This program utilizes web-based instruction for the didactic coursework. The clinical practicum courses and field work are taken at affiliated radiation oncology departments and are approximately 30-40 hours per week.

**Program length**

The Master of Science (M.S.) in Medical Dosimetry Program is typically a 16-month program. Number of credits required varies by track. The program length is based on how long the required UWL coursework would take to complete for a full-time student who does not need to complete any prerequisite coursework. Program length may be extended if students attend part-time (if approved by program) or due to the requirements of an individual student's plan of coursework, research or capstone project.
DOS 515 Cr.1
**Computers and Networking in Radiation Oncology**
This course introduces students to basic computer terminology, features of hardware, peripherals, and clinical applications in radiation oncology. Types of networking and the components involved are discussed. Specific network protocols used in healthcare, imaging, and radiation oncology will be described. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall.

DOS 516 Cr.1
**Fundamentals of Radiation Safety**
Radiation safety measures are reviewed and updated according to federal and state mandates. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall.

DOS 518 Cr.2
**Professional Issues in Medical Dosimetry**
This course introduces the student to professional practices of medical dosimetry including standards, scope of practice, ethics, legal perspectives, professional development, accreditation, operational issues, and continuous quality improvement (CQI) project development. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall.

DOS 522 Cr.2
**Radiation Dose Calculations**
This course introduces factors that affect dose delivered in radiation treatments and how these factors are accounted for in calculations. Web-based course. Prerequisite: DOS 511; acceptance into the Master of Science in Medical Dosimetry Program. Offered Spring.

DOS 523 Cr.4
**Treatment Planning and Calculations**
Treatment planning computers and software applicable to the various techniques used in clinic are discussed. Methods of treatment planning techniques for various diseases using single and multiple field arrangements with photons and electrons are discussed. In addition, advanced treatment planning techniques of conformal radiation therapy including 3D treatment planning, IMRT, IGRT, VMAT, Gating, Protons, and Stereotactic are also discussed. For basic and advanced treatment planning techniques, factors that affect dose distribution and delivery and how to account for those factors in dose calculations are explained. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Spring.

DOS 525 Cr.2
**Brachytherapy for Medical Dosimetrists**
The use of brachytherapy in radiation therapy is addressed. Characteristics of sources utilized for treatment and the evaluation of source activity and possible approaches for treatment including determination of activity, dose delivered are included. Methods and instruments utilized to apply brachytherapy treatment planning techniques to clinical treatment situations are discussed. Prerequisite: acceptance into the Master of Science Medical Dosimetry Program. Offered Summer.

DOS 531 Cr.2
**Clinical Oncology for Medical Dosimetrists**
This course covers various cancers specific to disease sites, treatment, and management of care during treatment. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Spring.

DOS 541 Cr.1
**Radiobiology for Medical Dosimetrists**
This course reviews the effect of radiation on the human body in the context of radiation treatments. It particularly focuses on factors affecting the therapeutic ratio. Prerequisite: DOS 522; acceptance into the Master of Science in Medical Dosimetry Program. Offered Summer.

DOS 542 Cr.1
**Dosimetric Quality Assurance**
The methods and importance of periodic quality assurance procedures of treatment planning equipment and processes are covered in this course. Web-based course. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall.

DOS 543 Cr.1
**Seminar in Medical Dosimetry**
This course offers students an opportunity to practice answering questions and solving problems as they review course material to prepare for the national medical dosimetry certification board exam. Web-based course. Prerequisite: DOS 531; acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall.

DOS 711 Cr.2
**Research Methodology in Medical Dosimetry I**
This course serves as an introduction of fundamental principles of research methodology and how principles are applied for conducting research in health sciences. Students will be introduced to basic terms and how they are related to the research process. The course will help students prepare to select a research topic and develop questions related to it. Library and literature resources and procedures for using them will be described in detail. Students will learn how to formulate a research hypothesis. This course will help prepare students for their own scholarly project. Web-based course. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.

DOS 731 Cr.2
**Research Methodology in Medical Dosimetry II**
This course follows in sequence the Research Methodology in Medical Dosimetry I course and expands on research terminology. This course discusses ethical concerns and legal responsibilities associated with the conduct of research. Sampling, measuring instruments and statistics will be discussed in detail. Types of research will be described in detail while expanding on principles from the Research Methodology in Medical Dosimetry I course. Students will learn the process of writing and evaluating the final research report. Web-based course. Prerequisite: DOS 711; acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.

DOS 741 Cr.1
**Protocols and Studies in Radiation Oncology**
This course provides a broad overview of cancer clinical trials. Students will discuss improving the approaches to cancer prevention, diagnosis, and treatment. Advantages and disadvantages of clinical trials for patients, the general population, and health care providers are discussed. The role of the medical dosimetrist involved in clinical trials is described in depth. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.

DOS 750 Cr.1
**Professional e-Portfolio**
This course prepares students for the development of a professional e-portfolio. Students will discover the basic concepts of designing and creating an e-portfolio, terminology, and components included in a professional e-portfolio. Students will gather artifacts and materials throughout the program to develop a comprehensive e-portfolio project. The course will focus on additional components such as electronic multimedia files, course assessment components, self-reflections, achievements, and other reflective learning enhancements for the comprehensive e-portfolio. Prerequisite: acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.
DOS 751 Cr.2
Research Methodology in Medical Dosimetry III
This course follows in sequence with the Research Methodology in Medical Dosimetry II course and serves as the culminating research course. Students will utilize peer review and editing, and various elements of individualized instruction while preparing their final research report. Students will be prepared to have their final reports in a publishable format to enter the AAMD national student writing competition. Web-based course. Prerequisite: DOS 731; acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.

DOS 771 Cr.5
Dosimetry Clinical Practicum I
Students gain clinical experience in Simulation patient set-ups and imaging studies, physics and radiation safety in the clinical environment, anatomical contour segmentation, and computers and networking within the radiation oncology field. Students will begin basic calculations and treatment planning while being introduced to brachytherapy procedures. Prerequisite: DOS 511; acceptance into the Master of Science in Medical Dosimetry Program. Offered Spring.

DOS 772 Cr.5
Dosimetry Clinical Practicum II
Students continue to gain clinical experience at an affiliated clinical internship site by concentrating on more advanced treatment planning and Brachytherapy procedures while continuing to learn the various concepts of clinical oncology specific to patient treatments. Prerequisite: DOS 771; acceptance into the Master of Science in Medical Dosimetry Program. Offered Summer.

DOS 773 Cr.5
Dosimetry Clinical Practicum III
Students continue to improve their treatment planning and dosimetric skills, concentrating on advanced planning methods and quality assurance techniques. Prerequisite: DOS 772; acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall.

DOS 781 Cr.3
CMD Seminar I
This seminar course is the first in a series of three designed exclusively for students in the master’s degree completion program (Track C) who are currently certified medical dosimetrists. The course provides the student with directed study and review of professional didactic course content. The course also provides the opportunity for practice examinations and group study support (online). Examinations will be given to test mastery of this didactic content. Students will have the opportunity to apply this didactic content in their fieldwork placements. Content covered in this course includes: professional issues, seminars, Brachytherapy, and radiation safety in the clinical environment at an intermediate level. The course provides an opportunity to integrate the didactic curriculum learned for the successful completion of the MDCB exam. The focus of case studies will include professional issues, radiation dose calculations, treatment planning, Brachytherapy, and clinical oncology. Supervision is provided by medical physicists and radiation oncologists. Prerequisite: DOS 791; acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.

DOS 782 Cr.3
CMD Seminar II
This seminar course is the second in a series of three designed exclusively for students in the master’s degree completion program (Track C) who are currently certified medical dosimetrists. The course provides the student with directed study and review of professional didactic course content. The course also provides the opportunity for practice examinations and group study support (online). Examinations will be given to test mastery of this didactic content. Students will have the opportunity to apply this didactic course in their fieldwork placements. Content covered in this course includes: professional issues, seminars, Brachytherapy, and radiation safety in the clinical environment at an advanced level. The course provides an opportunity to integrate the didactic curriculum learned for the successful completion of the MDCB exam. The focus of case studies will include professional issues, radiation dose calculations, treatment planning, Brachytherapy, and clinical oncology. Supervision is provided by medical physicists and radiation oncologists. Prerequisite: DOS 792; acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.

DOS 783 Cr.3
CMD Seminar III
This seminar course is the third in a series of three designed exclusively for students in the master’s degree completion program (Track C) who are currently certified medical dosimetrists. The course provides the student with directed study and review of professional didactic course content. The course also provides the opportunity for practice examinations and group study support (online). Examinations will be given to test mastery of this didactic content. Students will have the opportunity to apply this didactic content in their fieldwork placements. Content covered in this course includes: professional issues, seminars, Brachytherapy, and radiation safety in the clinical environment at an advanced level. The course provides an opportunity to integrate the didactic curriculum learned for the successful completion of the MDCB exam. The focus of case studies will include professional issues, radiation dose calculations, treatment planning, Brachytherapy, and clinical oncology. Supervision is provided by medical physicists and radiation oncologists. Prerequisite: DOS 793; acceptance into the Master of Science in Medical Dosimetry Program. Offered Fall, Spring, Summer.
