www.uwlax.edu/geography-and-earth-science

Geography is the science of place and space. Geographers ask where things are located on the surface of the earth, why they are located where they are, how places differ from one another, and how people interact with the environment. There are two main branches of geography: human geography and physical geography. Human geography is concerned with the spatial aspects of human existence - how people and their activity are distributed in space, how they use and perceive space, and how they create and sustain the places that make up the earth's surface. Human geographers work in the fields of urban and regional planning, transportation, marketing, real estate, tourism, and international business. Physical geographers study patterns of climates, land forms, vegetation, soils, and water. They forecast the weather, manage land and water resources, and analyze and plan for forests, rangelands, and wetlands. Many human and physical geographers have skills in cartography and geographic information systems (GIS). Geographers also study the linkages between human activity and natural systems.

Students who are considering studying geography and earth science will probably answer yes to one or more of the following questions: Are you curious about places? Do you like to study maps? Are you interested in the constantly changing pattern of human activity and natural phenomena on the landscape? Are you interested in foreign areas? Do you like to work outside? Are you a problem solver? Are you good at seeing connections among seemingly unrelated processes? Can you adapt to rapid technological change? Do you try to see the bigger picture? Are you interested in connections between humans and the environment?

2017-18 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in June.

Professor
Cynthia Berlin
Georges Cravins

Associate Professor
Colin Belby

Assistant Professor
Joan Bunbury
Gargi Chaudhuri
John Kelly

Niti Mishra
Paul Reyerson
Daniel Sambu

Lecturer
Jeffrey Kueny

GIS Lab Manager
Steven Fulton

Administrative Support
Debra Gerke

Majors

Earth Science Courses

+ESC 101 Cr.4

Earth Environments
This course concentrates on understanding the earth’s dynamic environments through the study of processes and physical and human interactions related to the lithosphere, hydrosphere and atmosphere. A scientific approach is used to examine fundamental concepts in earth and environmental science related to topics such as plate tectonics, landform development, atmospheric processes, global climate, and water resources, in order to provide an understanding of how the earth system functions and the human role in these phenomena. Lect. 3, Lab 2. Offered Fall, Spring.

+ESC 211 Cr.3

Global Warming and Climate Change
This course explores the scientific basis of global warming and climate change, and its current and likely impacts on human society and the environment. Actions that could be taken by governments, by industry, and by individuals to mitigate the effect will also be addressed. Discussion of global warming is situated in the context of models of climate change, focusing on alternative interpretations of the effects of anthropogenic greenhouse gases on global warming. Offered Fall, Spring.

ESC 221 Cr.4

Weather and Climate
An introduction to physical principles and the dynamic processes that govern the behavior of the atmosphere at global and regional scales. Spatial and temporal variations of energy, moisture, circulation, and weather systems; and the patterns of the world climate systems are discussed. Lect. 3; Lab 2. Prerequisite: ESC 101. Offered Fall.

ESC 222 Cr.4

Earth Surface Processes & Landforms
An introduction to the earth surface processes that are dominant in forming various types of landforms. Spatial variations in landforms will be studied both at the local scale and as the outcome of large-scale global processes. Lect. 3, Lab 2. Prerequisite: ESC 101. Offered Spring.

ESC/GEO 250 Cr.3

Maps and GIS
Students will acquire fundamental knowledge and learn key concepts underlying spatial data, different map types and uses, thematic symbolization and visualization, and spatial analytical techniques. They will learn how to critically assess and communicate knowledge concerning spatial environments. Students will also learn how to use GIS and Web mapping technologies. Lect. 2, Lab 2. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall, Spring.

ESC/GEO 321 Cr.3

Sustainable Development and Conservation
This course is designed to engage students in critical thinking with regard to how the current momentum in environmental conservation is shaping global development practices. The dual and seemingly conflicting mandates of conservation and development are examined not only through theory but also case studies from different parts of the world. Offered Annually.

ESC/GEO 345 Cr.3

Remote Sensing
Introduction to remote sensing, emphasizing satellite multispectral observations of the earth applied to such fields as agriculture, forestry, water resources, urban and regional planning, and environmental assessment. Upper Midwest and selected areas worldwide are explored with visual and digital image processing techniques. (Cross listed with ESC/GEO, may only earn credit in one department.) Offered Fall.

ARC/ESC/GEO 347 Cr.3

Geoarchaeology
An applied course on the contribution of earth sciences to the interpretation of archaeological contexts. This course will consist of field, lab and lecture components. Emphasis is placed on the methods of geoarchaeology and the applications of selected earth science fields to archaeological problems. Field trips will be a required component of the course in order to complete field descriptions and sampling. Prerequisite: ARC 196 or ESC 222 or ESC/GEO 426 or ESC/GEO 430. (Cross-listed with ARC/ESC/GEO; may only earn credit in one department.) Offered Occasionally.

ESC/GEO 355 Cr.3

Map Design and Geovisualization
In this course students will learn about the process of making maps, how to acquire and appropriately manipulate spatial data, and how to design clear, compelling, and beautiful maps. In addition to the key theories underlying the cartographic discipline, students will learn technical skills to enhance their other research interests and make them far more competitive on the job market once they graduate. Students will apply their knowledge about map design using cutting edge software. Lect. 2, Lab 2. Prerequisite: GEO/ESC 250. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall.

ESC/GEO 385 Cr.3

Introduction to Geographic Information System and Science
An introduction to both theoretical and applied aspects of Geographic Information Systems (GIS). GIS software, with an emphasis on ArcGIS, will be used to explore geographic questions. Hands-on exercises pertaining to environmental science, natural resource management, business, and urban planning will be used to complement lecture material. Topics will include data organization, database structure, input and output, data quality, and geographic analysis of spatial and attribute data. Lect. 2, Lab 2. Prerequisite: ESC/GEO 250, STAT 145. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall, Spring.

ESC/GEO 390 Cr.3

Geospatial Field Methods
Covers fundamental concepts of geospatial data collection, analysis, and representation. Students gain hands-on experience using geospatial technology at field sites in the La Crosse area. Includes reconnaissance and surveys using current methods, including GPS and total stations; and practical integration of field data into a geographic information system. Lect. 2, Lab. 2. Prerequisite: ESC/GEO 385 or concurrent enrollment; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall.
ESC/GEO 422/522 Cr.3

Meteorology
Atmospheric concepts and processes of the earth’s weather are covered. Principles and laws which govern the behavior of the atmosphere are investigated, including energy exchange between the earth and the atmosphere, forces governing atmospheric motion, atmospheric moisture and stability, condensation and precipitation processes, air masses and cyclogenesis, thunderstorm and tornado development, and hurricanes. Surface and upper-air charts, synoptic patterns, thermodynamic charts, radar and satellite images, and weather patterns are analyzed. Prerequisite: ESC 221; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring.

ESC/GEO 425/525 Cr.3

Biogeography
A systematic analysis of the geographic distribution of organisms from historical, ecological and regional perspectives. Emphasis is placed on the principles and the methods of biogeography. Special reference is made to bio-geographic regions, the distribution of organisms in space and time, and ecological biogeography. Prerequisite: ESC 101 or ESC 211; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall - Odd Numbered Years.

ESC/GEO 426/526 Cr.4

Soil Systems
A comprehensive study of soils around the world and the factors and processes that drive their formation and dynamic evolution. Emphasis is placed on soil morphology, formation, and biogeochemical influences within the soil environment. A one-credit lab section is devoted to the hands-on exploration and study of soils through laboratory and field exercises. Prerequisite: ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Alternate Years.

ESC/GEO 427 Cr.3

Water Resources
A study of physical water resources systems and management and utilization of water as a resource. Class activities will include seminars on critical water resource management issues and hands-on analysis of pertinent data, including exercises in Geographic Information Systems. Prerequisite: ESC 101; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

ESC/GEO 428 Cr.3

Past Environmental Change
An overview of the study of environmental change during the Quaternary. Approaches used to understand past climatic conditions and effects on terrestrial and marine ecosystems at global, regional and local scales will be explored, as will physical, geochemical and biological methods associated with continuous and depositional environments. Prerequisite: ESC 221 and ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Alternate Years.

ESC/GEO 430/530 Cr.3

River Systems
A systematic study of the interactions between flowing water and surface landforms. Emphasis is placed on watershed and stream development, sediment transport and storage, flow frequency analysis, and applications of fluvial principles to river management and stream restoration. Class activities will include field exercises in the La Crosse region, mathematical analysis of hydrologic variables, and spatial analysis with Geographic Information Systems. Prerequisite: ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

ESC/GEO 440/540 Cr.3

Geographic Interpretation of Aerial Photographs
Systematic applications of aerial photographs in the interpretation and analysis of geographic problems. Emphasis is placed on the interpretation of digital photographs within a geographic information system. Topics include urban and rural land use, natural resource, and environmental assessment. Lect.2, Lab. 2. Prerequisite: ESC/GEO 385; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Occasionally.

ESC/GEO 445/545 Cr.3

Advanced Remote Sensing
Advanced techniques of digital satellite and airborne image analysis and processing, emphasizing theory and applications in natural resource, land use and environmental assessment. Includes practical approaches to integrating imagery with geographic information systems for spatial analyses and decision making. Data acquisition, integrity, manipulation, formatting, storage, and retrieval are also examined. Prerequisite: ESC/GEO 345. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring.

ESC/GEO 450 Cr.3-12

Geography Internship
Practical experience with a variety of organizations where the student’s geographic background and training can be utilized to advantage. Students are placed in carefully selected positions screened by the department. Actual work supervision is accomplished by personnel of the selected agency and the department staff coordinator. A maximum of five credits may be counted toward the non-education major. Prerequisite: geography major; cumulative GPA of 2.25 with a minimum of 2.75 GPA in geography; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESC/GEO 455/555 Cr.3

Web Mapping
In this course, students will learn how to produce and design interactive Web maps for communication. Web maps take many forms and they are continually changing. Thus, the objective of this course is to do two things: (1) develops proficiency in the scripting languages and tools most frequently used to design and create these maps; and (2) teaches the theory and concepts underlying good Web map design so that as the technologies change in the future students will still be able to design effective Web maps. At the end of this course, students will be able to design a Web map from scratch. Lect. 2, Lab 2. Prerequisite: ESC/GEO 250; ESC/GEO 355; junior standing. (Cross-listed with ESC/GEO, may only earn credit in one department.) Offered Spring.

ESC/GEO 460/560 Cr.3

Environmental Hazards
Environmental processes are investigated in light of the hazards they might pose for development and how they may be avoided, mitigated and managed. Prerequisite: ESC 221 or ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall - Even Numbered Years.

ESC/GEO 470/570 Cr.1-3

Special Topics in Geography/Earth Science
Specifically selected topics or skills which may be designed for the interest of special groups will be offered with formalized instruction and methodology appropriate to geography and/or earth science. May be counted as an elective in the geography major or earth science minor at the discretion of the Geography/Earth Science Department. Prerequisite may be required at the discretion of the department. Repeatable for credit - maximum six. Prerequisite: junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Occasionally.
and how our lives are directly, indirectly, knowingly, and unknowingly
amounts of personal information that can affect personal security
(in planning, in marketing, in hazard controls, etc.) embed substantial

It focuses on privacy and civil liberty issues of the individual
and presents the influence of maps on an individual through mass media
the meaning of maps and their relationship to culture and society past

This course introduces all aspects of maps and how they affect the
individual in society. It examines the evolution of maps, the map as an
art form, the map as a communication medium for spatial knowledge,
the meaning of maps and their relationship to culture and society past
and present, the influence of maps on an individual through mass media
and the Internet, and the way maps reflect personal and societal points
of view. It focuses on privacy and civil liberty issues of the individual
in the age of digital information where maps and map databases can
disclose the privacy of personal space. In addition, today’s GIS maps
in planning, in marketing, in hazard controls, etc.) embed substantial
amounts of personal information that can affect personal security
and how our lives are directly, indirectly, knowingly, and unknowingly
influenced. Offered Fall, Spring.

+GEO 102 Cr.3
Maps and Society
This course introduces all aspects of maps and how they affect the
individual in society. It examines the evolution of maps, the map as an
art form, the map as a communication medium for spatial knowledge,
the meaning of maps and their relationship to culture and society past
and present, the influence of maps on an individual through mass media
and the Internet, and the way maps reflect personal and societal points
of view. It focuses on privacy and civil liberty issues of the individual
in the age of digital information where maps and map databases can
disclose the privacy of personal space. In addition, today’s GIS maps
in planning, in marketing, in hazard controls, etc.) embed substantial
amounts of personal information that can affect personal security
and how our lives are directly, indirectly, knowingly, and unknowingly
influenced. Offered Fall, Spring.

+GEO 110 Cr.3
World Cultural Regions
This course provides an understanding of the global distribution of
world cultures. The cultural, economic and natural patterns and their
interrelationships are examined on a global and regional scale. The
development and distribution of cultural regions within countries are
included when appropriate. Offered Fall, Spring.

+GEO 200 Cr.3
Conservation of Global Environments
Introduction to natural resources, resource management, environmental
and land use ethics, environmental impacts of resource utilization and
strategies to resolve environmental conflicts. Course examines the
relationships between society and the environment from the global to
the local scale. Offered Fall, Spring.

GEO 201 Cr.3
Geography of United States and Canada
Physical and cultural characteristics of United States and Canada.
Changing patterns of land use and the accompanying economic and
cultural development of the various regions. Offered Occasionally.

+GEO 202 Cr.3
Contemporary Global Issues
This course will offer a contemporary multi-disciplinary perspective
regarding the major issues and trends confronting the global society
as it enters the 21st century. Emphasis will be given to a critical review
and assessment of the origin and present condition of the plethora of
situations and problems affecting modern global society. The student
will also learn to critically evaluate current and future events. The course
will incorporate the views and approaches of the following disciplines:
sociology/anthropology, economics, geography, political science, and
history. Students may only earn credit in one of the following: ANT 202,

GEO 204 Cr.3
Geography of Wisconsin
Geographic patterns in Wisconsin. Physiographic regions, climate,
population distribution, resources and their use, agriculture, industry,
transportation, and urban growth. Offered Occasionally.

GEO 208 Cr.3
Applications of Geographic Information Systems I
An introduction to applied aspects of Geographic Information Systems.
GIS software, with an emphasis on ArcGIS, will be used to develop
working proficiency with basic GIS procedures and applications. Topics
include data input and output, forming queries, data overlay processes,
and creating map layouts. Prerequisite: not open to geography majors.
Offered Occasionally.

ESC/GEO 250 Cr.3
Maps and GIS
Students will acquire fundamental knowledge and learn key concepts
underlying spatial data, different map types and uses, thematic
symbolization and visualization, and spatial analytical techniques.
They will learn how to critically assess and communicate knowledge
concerning spatial environments. Students will also learn how to use
GIS and Web mapping technologies. Lect. 2, Lab 2. (Cross-listed with
ESC/GEO; may only earn credit in one department.) Offered Fall, Spring.

GEO 300 Cr.3
Population Geography
A systematic analysis of the populations of the world and the
geographic factors influencing human existence. A study of the origin
and distribution of populations and the cultural features with which they
are associated. Offered Occasionally.
GEO 304 Cr.3
**Geography of Europe**
Geographic factors in the changing physical, political, cultural and economic patterns in Europe. Emphasis on northwestern, central, and southern Europe and their importance in world affairs. Offered Occasionally.

GEO 306 Cr.3
**Economic Geography**
This course introduces students to the global economic patterns which have shaped and conditioned the world of the 1990s, and the salient economic geography models and approaches which help to explain such patterns. Elements emphasized include the evolution of social and economic organization; the globalization of economic activity since the late 1400s; the interconnectivity of development and underdevelopment; and the relationship between development and social environmental problems. Prerequisite: GEO 110 or ECO 110 or HIS 101 or ANT/ECO/GEO/HIS/POL/SOC 202. Offered Occasionally.

GEO 307 Cr.3
**Political Geography**
A real differentiation and analysis of relationships between geographic factors and political entities. This includes physical environment, organization of space, cultural influences, and economic capabilities. Offered Occasionally.

GEO 308 Cr.3
**Applications of GIS II**
Advanced exploration of geographic information systems tools and applications. GIS software, with an emphasis on ArcGIS, is used to develop advanced GIS skills. Topics include: working with coordinate systems, editing and managing relational databases, working with ArcGIS extensions, and GIS project management. Prerequisite: GEO 208. Not open to geography majors. Offered Occasionally.

GEO 309 Cr.3
**Urban Geography**
Geographical study of cities, their form, function, site and situation. Classification of cities, urban land use patterns, and the role of the city within its region. Offered Occasionally.

GEO 310 Cr.3
**Transportation Geography**
Transportation geography is the study of the movement of people and commodities across the earth’s surface. It deals with the spatial interactions between people and places. This course is designed to introduce you to the study of transportation systems from a geographic perspective. One can think of transportation as a service that the transportation industry offers travelers to insure mobility. The relation between the supply for transportation and the demand for moving people and goods characterize the performance of the transportation system. Such performance is extremely important for our sustainability as it relates to the well being of our economy, society and environment. Studying a transportation system and its performance entails the analysis of various aspects that relate to infrastructure, vehicles, and operations by which vehicles are operated using the available infrastructure. The effective management of transportation systems requires an understanding of various concepts and analytical methods that are often used by transportation professionals to make informed decisions about transportation policy. While transport geographers study a wide range of topics, the focus of this introductory course is on: theoretical and practical concepts of transport geography, current transportation issues and problems, and analytical methods for describing, analyzing and modeling transportation systems using GIS software. Offered Annually.

GEO 312 Cr.3
**Geography of Africa**
Cultural, physical and economic characteristics including the bases of problems in socio-economic development are investigated from a geographic perspective. Resources, regions, and world ties are studied. Offered Occasionally.

GEO 318 Cr.3
**The Geography of Latin America & the Caribbean**
The cultural and physical characteristics of Latin America and the Caribbean region are systematically examined and explained. This includes an examination of diverse physical and ‘built’ environments that encompass this region, from the borderlands of northern Mexico to the Tierra Del Fuego of the south; from the lush tropical environments of the Amazon, Jamaica, and Puerto Rico, to the Altiplano and arid regions of the west; from disparate lowlands to the startling mountain zones of the Andes. Indigenous civilizations which developed out of unique arrangements with these complex environments as well as those imposed and imported since 1500 will be explored in depth. Offered Occasionally.

ESC/GEO 321 Cr.3
**Sustainable Development and Conservation**
This course is designed to engage students in critical thinking with regard to how the current momentum in environmental conservation is shaping global development practices. The dual and seemingly conflicting mandates of conservation and development are examined not only through theory but also case studies from different parts of the world. Offered Annually.

GEO 328 Cr.3
**Geography of East and Southeast Asia**
The geography of China, Japan, the Koreas, and Mongolia; the geography of the 10 states of Southeast Asia, including Indonesia, Thailand, Vietnam, Philippines, and Burma. Contemporary geopolitical problems and prospects; East Asia and the world; primordial and historical factors contributing to identity and conflict. The course emphasizes human-cultural patterns, salient physical characteristics, and the relationship between these. Offered Occasionally.

GEO 331 Cr.3
**Geography of the Middle East, Central and South Asia**
Cultural, physical and economic elements of this predominantly Islamic domain are examined from a geographic perspective for a better understanding of this region of the world. Cultural and socio-economic impact of these regions on other regions and cultures of the world, including their resources, are investigated. Offered Occasionally.

GEO 340 Cr.3
**Earth’s Polar Regions**
The geography of the Arctic and Antarctic. Physical environment, climate, terrestrial and marine ecosystems, natural resources and development, exploration, governance, indigenous peoples, and anthropogenic impacts. Comparisons and contrasts between the circumpolar northern Arctic region and the southern continent of Antarctica. Connections of the polar regions to global processes and international issues. Offered Occasionally.

ESC/GEO 345 Cr.3
**Remote Sensing**
Introduction to remote sensing, emphasizing satellite multispectral observations of the earth applied to such fields as agriculture, forestry, water resources, urban and regional planning, and environmental assessment. Upper Midwest and selected areas worldwide are explored with visual and digital image processing techniques. (Cross listed with ESC/GEO, may only earn credit in one department.) Offered Fall.
ARC/ESC/GEO 347 Cr. 3

**Geoarchaeology**
An applied course on the contribution of earth sciences to the interpretation of archaeological contexts. This course will consist of field, lab and lecture components. Emphasis is placed on the methods of geoarchaeology and the applications of selected earth science fields to archaeological problems. Field trips will be a required component of the course in order to complete field descriptions and sampling. Prerequisite: ARC 196 or ESC 222 or ESC/GEO 426 or ESC/GEO 430. (Cross-listed with ARC/ESC/GEO; may only earn credit in one department.) Offered Occasionally.

ESC/GEO 355 Cr. 3

**Map Design and Geovisualization**
In this course students will learn about the process of making maps, how to acquire and appropriately manipulate spatial data, and how to design clear, compelling, and beautiful maps. In addition to the key theories underlying the cartographic discipline, students will learn technical skills to enhance their other research interests and make them far more competitive on the job market once they graduate. Students will apply their knowledge about map design using cutting edge software. Lect. 2, Lab 2. Prerequisite: GEO/ESC 250. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall.

ESC/GEO 385 Cr. 3

**Introduction to Geographic Information System and Science**
An introduction to both theoretical and applied aspects of Geographic Information Systems (GIS). GIS software, with an emphasis on ArcGIS, will be used to explore geographic questions. Hands-on exercises pertaining to environmental science, natural resource management, business, and urban planning will be used to complement lecture material. Topics will include data organization, database structure, input and output, data quality, and geographic analysis of spatial and attribute data. Lect. 2, Lab 2. Prerequisite: ESC/GEO 250; STAT 145. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall, Spring.

ESC/GEO 390 Cr. 3

**Geospatial Field Methods**
Covers fundamental concepts of geospatial data collection, analysis, and representation. Students gain hands-on experience using geospatial technology at field sites in the La Crosse area. Includes reconnaissance and surveys using current methods, including GPS and total stations; and practical integration of field data into a geographic information system. Lect. 2, Lab 2. Prerequisite: ESC/GEO 385 or concurrent enrollment; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall.

GEO 401 Cr. 1

**Focus on Geography: A Capstone Course**
A seminar-style course designed to prepare students for graduate school and/or a career in geography/earth science. This course will cover the basic concepts of interviewing, graduate school application, oral presentation of a topic, and the writing of professional abstracts. The development of the field will be studied by the reading and discussion of landmark articles in geography and earth science. Students are expected to actively participate in the assessment of their major. Prerequisite: senior standing. Offered Fall.

ECO/GEO/HIS/POL/PSY/SOC 408 Cr. 4

**Teaching and Learning History & Social Studies in the Secondary School**
This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. Prerequisite: EDS 381. (Cross-listed with ECO/GEO/HIS/POL/PSY/SOC; may only earn credit in one department.) Offered Fall, Spring.

ESC/GEO 422/522 Cr. 3

**Meteorology**
Atmospheric concepts and processes of the earth's weather are covered. Principles and laws which govern the behavior of the atmosphere are investigated, including energy exchange between the earth and the atmosphere, forces governing atmospheric motion, atmospheric moisture and stability, condensation and precipitation processes, air masses and cyclogenesis, thunderstorm and tornado development, and hurricanes. Surface and upper-air charts, synoptic patterns, thermodynamic charts, radar and satellite images, and weather patterns are analyzed. Prerequisite: ESC 221; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring.

ESC/GEO 425/525 Cr. 3

**Biogeography**
A systematic analysis of the geographic distribution of organisms from historical, ecological and regional perspectives. Emphasis is placed on the principles and the methods of biogeography. Special reference is made to bio-geographic regions, the distribution of organisms in space and time, and ecological biogeography. Prerequisite: ESC 101 or ESC 211; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring.

ESC/GEO 426/526 Cr. 4

**Soil Systems**
A comprehensive study of soils around the world and the factors and processes that drive their formation and dynamic evolution. Emphasis is placed on soil morphology, formation, and biogeochemical influences within the soil environment. A one-credit lab section is devoted to the hands-on exploration and study of soils through laboratory and field exercises. Prerequisite: ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Alternate Years.

ESC/GEO 427 Cr. 3

**Water Resources**
A study of physical water resources systems and management and utilization of water as a resource. Class activities will include seminars on critical water resource management issues and hands-on analysis of pertinent data, including exercises in Geographic Information Systems. Prerequisite: ESC 101; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring - Odd Numbered Years.
ESC/GEO 428 Cr.3
Past Environmental Change
An overview of the study of environmental change during the Quaternary. Approaches used to understand past climatic conditions and effects on terrestrial and marine ecosystems at global, regional and local scales will be explored, as will physical, geochemical and biological methods associated with continuous and depositional environments. Prerequisite: ESC 221 and ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Alternate Years.

ESC/GEO 430/530 Cr.3
River Systems
A systematic study of the interactions between flowing water and surface landforms. Emphasis is placed on watershed and stream development, sediment transport and storage, flow frequency analysis, and applications of fluvial principles to river management and stream restoration. Class activities will include field exercises in the La Crosse region, mathematical analysis of hydrologic variables, and spatial analysis with Geographic Information Systems. Prerequisite: ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

ESC/GEO 440/540 Cr.3
Geographic Interpretation of Aerial Photographs
Systematic applications of aerial photographs in the interpretation and analysis of geographic problems. Emphasis is placed on the interpretation of digital photographs within a geographic information system. Topics include urban and rural land use, natural resource, and environmental assessment. Lect. 2, Lab 2. Prerequisite: ESC/GEO 385; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Occasionally.

ESC/GEO 445/545 Cr.3
Advanced Remote Sensing
Advanced techniques of digital satellite and airborne image analysis and processing, emphasizing theory and applications in natural resource, land use and environmental assessment. Includes practical approaches to integrating imagery with geographic information systems for spatial analyses and decision making. Data acquisition, integrity, manipulation, formatting, storage, and retrieval are also examined. Prerequisite: ESC/GEO 345. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring.

ESC/GEO 450 Cr.3-12
Geography Internship
Practical experience with a variety of organizations where the student’s geographic background and training can be utilized to advantage. Students are placed in carefully selected positions screened by the department. Actual work supervision is accomplished by personnel of the selected agency and the department staff coordinator. A maximum of five credits may be counted toward the non-education major. Prerequisite: geography major; cumulative GPA of 2.25 with a minimum of 2.75 GPA in geography; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESC/GEO 455/555 Cr.3
Web Mapping
In this course, students will learn how to produce and design interactive Web maps for communication. Web maps take many forms and they are continually changing. Thus, the objective of this course is to do two things: (1) develops proficiency in the scripting languages and tools most frequently used to design and create these maps; and (2) teaches the theory and concepts underlying good Web map design so that as the technologies change in the future students will still be able to design effective Web maps. At the end of this course, students will be able to design a Web map from scratch. Lect. 2, Lab 2. Prerequisite: ESC/GEO 250; ESC/GEO 355; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Spring.

ESC/GEO 460/560 Cr.3
Environmental Hazards
Environmental processes are investigated in light of the hazards they might pose for development and how they may be avoided, mitigated and managed. Prerequisite: ESC 221 or ESC 222; junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Fall - Even Numbered Years.

ESC/GEO 470/570 Cr.1-3
Special Topics in Geography/Earth Science
Specifically selected topics or skills which may be designed for the interest of special groups will be offered with formalized instruction and methodology appropriate to geography and/or earth science. May be counted as an elective in the geography major or earth science minor at the discretion of the Geography/Earth Science Department. Prerequisite may be required at the discretion of the department. Repeatable for credit - maximum six. Prerequisite: junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Occasionally.

ESC/GEO 476/576 Cr.1-3
Geography/Earth Science Topics for Teachers
Selected topics in geography and/or earth science pertinent to applications in the teachers’ classrooms. Courses are designed to meet the needs of teachers so that they may implement the course material into their classroom teaching. Prerequisite: junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Occasionally.

GEO 485/585 Cr.3
Advanced Geographic Information Science
Advanced theories in geographic information systems database structures, advanced applications, database transfers, database management, use of census data, spatial analysis, and decision-making. Emphasis on ARCGIS and its applications. Integration of GIS with remote sensing and GPS. Lect. 2, Lab. 2. Prerequisite: STAT 145; ESC/GEO 385; junior standing. Offered Spring.

GEO 488 Cr.3
Spatial Data Analysis
Theory, methods, and techniques for quantitative analysis of spatial data. Students will learn and employ basic quantitative techniques for describing, modeling, and analyzing spatial data. This course explores point pattern analysis, methods for continuous data, and spatial regression. Focus will be on the interpretation and the application of spatial data analysis techniques to address geographic problems. Prerequisite: STAT 145; GEO/ESC 385 or concurrent enrollment; junior standing. Offered Alternate Years.
ESC/GEO 490/590 Cr.2-3
**Independent Study**
Individual readings and investigation of selected problems in geography. Open to senior majors and minors with a "B" (3.00) average in geography. Registration with consent of regular advisor, instructor, department chairperson, and the dean of the college in which the student is enrolled. Repeatable for credit - maximum six. Maximum three credits applicable to major. Maximum three credits from any instructor. Prerequisite: junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Consent of instructor. Offered Fall, Winter, Spring, Summer.

ESC/GEO 495/595 Cr.1-3
**Seminar in Geography/Earth Science**
Investigation into various topics in geography or the earth sciences. Varying topics will be offered at intervals with a specific title assigned to each. Prerequisite: two semesters of geography and/or earth science. Additional prerequisite may be required by the instructor. Repeatable for credit - maximum six. Variable topics; check semester timetables. Prerequisite: junior standing. (Cross-listed with ESC/GEO; may only earn credit in one department.) Offered Occasionally.

ESC/GEO 499 Cr.1-3
**Undergraduate Research**
Individual research by an advanced student under the supervision of a faculty member in the geography/earth science department. The student must present a written report and either have their work published in an appropriate journal or presented either orally or by poster at a conference acceptable to the department chair and adviser. A contract must be signed by the student, the project advisor, the student's advisor and the Geography/Earth Science Department Chair. Repeatable for credit - maximum three. Three credits may be applied to a major or minor in geography and earth science. Prerequisite: 12 credits of geography and/or earth science with six of the credits numbered 300 or above, or consent of the instructor and department chair. (Cross-listed with GEO/ESC; may only earn credit in one department.) Offered Fall, Winter, Spring, Summer.
