Nuclear medicine technology is a health professions specialty employing the use of radiopharmaceuticals for diagnostic and therapeutic purposes. Students majoring in this program are provided a substantial educational foundation in the sciences and clinical applications in a hospital internship so that graduates may function as technologists. The pre-professional and professional program collectively requires six semesters on campus to earn a minimum of 71 credits including certain prescribed courses followed by a 12-month internship at an affiliated internship site.

Major

• Nuclear medicine technology - BS (http://catalog.uwlax.edu/undergraduate/nuclearmedicinetechnology/
  nulearmedicinetechnologybs/)

Courses

NMT 314 Cr.1
Cross-Sectional Anatomy
This course revisits anatomy specifically from an imaging perspective. Students will learn to identify normal and abnormal structures on CT and MRI scans and locate topographic landmarks on diagnostic and simulation images. Prerequisite: BIO 313 with a grade of "C" or better. Students with credit in RT 421 cannot earn credit in NMT 314. Offered Fall.

NMT 344 Cr.2
Medical Ethics and Health Administration
This course will focus on medical ethics, diversity, inclusive excellence, as they pertain to the profession of imaging sciences. We will also have a full review of the health information systems that support the technologist in their role in taking care of patients. Prerequisite: admitted into one of the NMT or RS programs. Offered Spring.

NMT 398 Cr.2
Research Writing in Nuclear Medicine Technology
This course focuses on students learning how to interpret published data and how to write an article ready for publication in professional journals in the field of nuclear medicine. Students in the Nuclear Medicine Technology Program will learn how to read, review, and comprehend NMT literature through a series of different writing exercises. Students will have opportunities to become comfortable deciphering the most up to date journal publications writing a journal article. Students will draft and revise their own work to become publication ready in "The Journal of Nuclear Medicine Technology. Prerequisite: concurrent enrollment in NMT 399; admission to NMT Program. Offered Spring.

NMT 399 Cr.1
Applied Research Writing in Nuclear Medicine Technology
This applied writing lab focuses on students practicing the art of interpreting data and summarizing NMT data. Learning how to summarize data and to write an article ready for publication in professional journals in the field of nuclear medicine will assist them in becoming successful in the field. The applied setting will offer students an opportunity to understand and perfect the different parts of writing an NMT research proposal. The applied writing lab provides opportunities for students to draft and revise their own work to become publication ready in "The Journal of Nuclear Medicine Technology. Prerequisite: concurrent enrollment in NMT 398; admission to NMT Program. Offered Spring.

NMT 401 Cr.2
Management and Methods of Patient Care I
The survey of hospital administrative procedures including medical terms and medical ethics. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 403 Cr.2-4
Anatomy, Physiology and Pathology
The anatomy, physiology and pathology of the human organ systems treated in the application of nuclear medicine. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 404 Cr.1-3
Management and Methods of Patient Care II
Skills in problem-solving, critical thinking and clinical decision making are developed, as well as oral and written clinical communication skills. Administrative duties including budgeting, medical and legal considerations, and political issues affecting patient care are discussed. Focus on basic measures necessary to provide quality patient care. Basic principles of record keeping and confidentiality of information are explained. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 405 Cr.1-5
Radiation Protection
Properties of alpha, beta, gamma, and x-ray radiations, their effects upon human beings and methods for protecting patients and staff from unnecessary exposure and possible injury. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 407 Cr.2-5
Clinical Instrumentation and Techniques
Structure, operating characteristics and practice in use of nuclear radiation detection instruments and radioisotope handling devices used in medical diagnosis and therapy. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.
NMT 412 Cr.3-9
Clinical Nuclear Practicum I
The supervised use of radionuclides in imaging and scanning of patients for diagnostic purposes. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 413 Cr.3-9
Clinical Nuclear Practicum II
The supervised use of radionuclides in vitro and in vivo in patients for diagnostic purposes. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 416 Cr.1-3
Nuclear Medicine Quality Control Practicum
Elution of Mo/Tc generator, preparation and testing of radiopharmaceutical products. Gamma Camera uniformity, relative sensitivity and spatial linearity and resolution testing. The use of flood field and bar phantoms on in vivo imaging detectors in the nuclear medicine imaging laboratory. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 417 Cr.2-5
Nuclear Radiation Physics and Instrumentation
Properties of alpha, beta and gamma radiations; their origins and interactions with matter, their control and shielding; and the statistics of counting. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 418 Cr.1-3
Clinical Procedures Review I
Classroom technique to establish clinical practices used in nuclear medicine imaging; develop techniques used in planar and SPECT imaging. The fundamental skills of patient care, radiopharmaceutical preparation and administration. Emphasis is also on computer processing techniques used in coordination with imaging procedures. Duration: two semesters. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 419 Cr.1-3
Clinical Radiation Biology
Cellular and organ responses to radiation sources and radionuclides employed in nuclear medicine. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 422 Cr.1-4
Clinical Procedures Review II
Classroom technique to establish clinical practices used in nuclear medicine imaging. To develop techniques used in planar and SPECT CT imaging that has been developed in addition to the previous course “Clinical Procedures Review” (NMT 418). The fundamental skills of patient care, radiopharmaceutical preparation and administration will be reviewed. Emphasis is also in computer processing techniques used in coordination with imaging procedures. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 423 Cr.1-5
Radiopharmacy and Pharmacology
The study of radiopharmacology and radiochemistry of isotopes used in clinical nuclear medicine for research, diagnosis, and therapy. This course includes lecture and field work. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 427 Cr.1-5
Clinical Evaluation of Mathematical Data in Nuclear Medicine
This is a study of data collection, reduction and enhancement by computers used in Nuclear Medicine to generate interpretable images and data for physicians to diagnose and treat patients. This course includes lecture and field work. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 429 Cr.1-5
Multimodality Imaging
This course is designed to present a more in depth overview of all imaging modalities that can be done simultaneously with gamma cameras and PET cameras (i.e. PET/CT, SPECT/CT, PET/MRI, etc.). It will be an overview of the cross sectional anatomy, physics and instrumentation that is offered from these modalities. Specific topics will include; physics, instrumentation, scanning and image production. Comparison of cross sectional anatomy, specific to the modality and PET or SPECT imaging will be covered. Emphasis will be placed on patient considerations for each modality, image production and processing, patient and technologist safety, radiation protection and/or procedure protocol. This course includes lecture and field work. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 499 Cr.3
Independent Study
Independent projects under the direction and supervision of a member of the clinical staff. Hours arranged. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.
